Welcome to the dota2api documentation. This Python library is an unofficial wrapper for the [Dota 2 API](#)<sup>1</sup> from [Valve Software](#)<sup>2</sup>. The repository can be found on [GitHub](#)<sup>3</sup>.

---

<sup>1</sup> [https://wiki.teamfortress.com/wiki/WebAPI#Dota\\_2](https://wiki.teamfortress.com/wiki/WebAPI#Dota_2)

<sup>2</sup> <http://www.valvesoftware.com/>

<sup>3</sup> <https://github.com/joshuaduffy/dota2api>

# CHAPTER 1

---

## Contents

---

## Installation

This section covers installation of the library.

---

**Tip:** Work in a virtual environment!

---

## Pip

Installing via `pip`<sup>1</sup> is the recommended method:

```
$ pip install dota2api
```

## Build from source

You can also download the latest version of the code from the [repository](https://github.com/joshua-duffy/dota2api)<sup>2</sup> and install:

```
$ git clone https://github.com/joshua-duffy/dota2api/ && cd dota2api/  
$ python setup.py install
```

## Tutorial

This section covers basic usage of the library.

---

<sup>1</sup> <http://www.pip-installer.org/>

<sup>2</sup> <https://github.com/joshua-duffy/dota2api>

## Getting an API Key

Get one from [Valve](#).

## D2\_API\_KEY environment variable

You can set the D2\_API\_KEY environment variable to save entering it all the time.

For example, in Linux:

```
$ export D2_API_KEY=83247983248793298732
```

## Initialising

If you've set the API Key as an environment variable, initialise the module like so:

```
>>> import dota2api
>>> api = dota2api.Initialise()
```

If not you'll need to pass it into the constructor:

```
>>> import dota2api
>>> api = dota2api.Initialise("45735474375437457457")
```

Official DOTA2 web API would response identifiers for records like heroes, items, lobby type, game mode, etc. By default, this dota2api would translate most dota2 identifiers into human readable strings. But you can disable our translation by enabling raw mode:

```
>>> import dota2api
>>> api = dota2api.Initialise("45735474375437457457", raw_mode=True)
```

By default, you'll get {"hero\_name": "axe"} for axe but when raw\_mode is on, it will be replaced by {"hero\_id", 2}.

## API calls

The functions are mapped to API calls:

```
>>> match = api.get_match_details(match_id=1000193456)
```

The responses are then returned in a dict:

```
>>> match['radiant_win']
False
```

Parameters can be used to filter the results. They're all listed in the [Library Reference](#)

## Get match history

You can use the account\_id parameter to filter the results for a specific user.

```
>>> hist = api.get_match_history(account_id=76482434)
```

## Get match details

```
>>> match = api.get_match_details(match_id=1000193456)
```

## Other API calls

Listed in the *Library Reference*

## Exceptions

`APIError` will be raised if an error message is returned by the API.

`APITimeoutError` will be raised if you're making too many requests or the API itself is down.

`APIAuthenticationError` will be raised if you're using an invalid API key.

## Responses

This section describes the dictionary structure of each response.

Every response has a number of attributes you can use. For example:

```
>>> match = api.get_match_details(match_id=1000193456)
```

The following will return the URL constructed by the library:

```
>>> match.url
```

The following will return the response as raw json:

```
>>> match.json
```

## get\_match\_history()

Returns a dictionary with a list of players within.

`match::lobby_type` – see *lobby\_type*.

`player::player_slot` – see *player\_slot*.

```
{
  num_results          - Number of matches within a single response
  total_results        - Total number of matches for this query
  results_remaining    - Number of matches remaining to be retrieved with
  ↳ subsequent API calls
  [matches]           - List of matches for this response
  {
    match_id           - Unique match ID
    match_seq_num      - Number indicating position in which this match was
    ↳ recorded
    start_time         - Unix timestamp of beginning of match
    lobby_type         - See lobby_type table
    [player]           - List of players in the match
```

```
{
    account_id      - Unique account ID
    player_slot     - Player's position within the team
    hero_id         - Unique hero ID
}
```

## player\_slot

The player slot is an 8-bit representation of the player's team and the slot (0-4) within the team.

```
----- Team (false if Radiant, true if Dire).
| ----- Not used.
| | | | | --- The position of a player within their team (0-4).
| | | | | | |
0 0 0 0 0 0 0 0
```

## get\_match\_history\_by\_seq\_num()

Returns a dictionary with a list of matches within. See [get\\_match\\_details\(\)](#) for structure of matches.

```
{
    status
        1 - Success
        8 - Matches_requested must be greater than 0
    statusDetail      - Message explaining a status that is not equal to 1
    [matches]         - See get_match_details()
}
```

## get\_match\_details()

Returns a match dictionary with with players.

For dynamic values such as kills or gold, if the match is live, then the value is current as of the API call. For matches that have finished, these values are simply the value at the end of the match for the player.

lobby\_type – see [lobby\\_type](#).

game\_mode and game\_mode\_name – see [game\\_mode](#)

```
{
    season              - Season the game was played in
    radiant_win         - Win status of game (True for Radiant win, False for_
↪Dire win)
    duration           - Elapsed match time in seconds
    start_time         - Unix timestamp for beginning of match
    match_id           - Unique match ID
    match_seq_num      - Number indicating position in which this match was_
↪recorded
    tower_status_radiant - Status of Radiant towers
    tower_status_dire   - Status of Dire towers
    barracks_status_radiant - Status of Radiant barracks
    barracks_status_dire - Status of Dire barracks
```

cluster	- The server cluster the match was played on, used in_
↪retrieving replays	
cluster_name	- The region the match was played on
first_blood_time	- Time elapsed in seconds since first blood of the match
lobby_type	- See lobby_type table
lobby_name	- See lobby_type table
human_players	- Number of human players in the match
leagueid	- Unique league ID
positive_votes	- Number of positive/thumbs up votes
negative_votes	- Number of negative/thumbs down votes
game_mode	- See game_mode table
game_mode_name	- See game_mode table
radiant_captain	- Account ID for Radiant captain
dire_captain	- Account ID for Dire captain
[pick_bans]	
{	
{	
hero_id	- Unique hero ID
is_pick	- True if hero was picked, False if hero was banned
order	- Order of pick or ban in overall pick/ban sequence
team	- See team_id table.
}	
}	
[players]	
{	
account_id	- Unique account ID
player_slot	- Player's position within the team
hero_id	- Unique hero ID
hero_name	- Hero's name
item_#	- Item ID for item in slot # (0-5)
item_#_name	- Item name for item in slot # (0-5)
kills	- Number of kills by player
deaths	- Number of player deaths
assists	- Number of player assists
leaver_status	- Connection/leaving status of player
gold	- Gold held by player
last_hits	- Number of last hits by player (creep score)
denies	- Number of denies
gold_per_min	- Average gold per minute
xp_per_min	- Average XP per minute
gold_spent	- Total amount of gold spent
hero_damage	- Amount of hero damage dealt by player
tower_damage	- Amount of tower damage dealt by player
hero_healing	- Amount of healing done by player
level	- Level of player's hero
[ability_upgrades]	- Order of abilities chosen by player
{	
ability	- Ability chosen
time	- Time in seconds since match start when ability was_
↪upgraded	
level	- Level of player at time of upgrading
}	
[additional_units]	- Only available if the player has a additional unit
{	
unitname	- Name of unit
item_#	- ID of item in slot # (0-5)

```
    }  
  }  
  // These fields are only available for matches with teams //  
  [radiant_team]  
  {  
    team_name          - Team name for Radiant  
    team_logo          - Team logo for Radiant  
    team_complete      - ?  
  }  
  [dire_team]  
  {  
    team_name          - Team name for Dire  
    team_logo          - Team logo for Dire  
    team_team_complete - ?  
  }  
}
```

## get\_league\_listing()

Returns a dictionary with a list of leagues within; can be viewed with DotaTV.

```
{  
  [leagues]  
  {  
    description      - Description of the league  
    itemdef          - ID for an item associated with the tournament  
    leagueid         - Unique league ID  
    name             - Name of the league  
    tournament_url   - League website information  
  }  
}
```

## get\_live\_league\_games()

Returns a dictionary with a list of league games within.

league\_tier – see [league\\_tier](#).

tower\_state – see [Towers and Barracks](#).

series\_type – see [series\\_type](#).

player::team – see [team\\_id](#).

```
{  
  [games]  
  {  
    league_id          - ID for the league in which the match is being played  
    league_tier         - Level of play in this game  
    league_series_id    - ?  
    [players]  
    {  
      account_id       - Unique account ID  
      name              - In-game display name  
      hero_id          - Unique hero ID  
      team              - Team the player is on  
    }  
  }  
}
```

```

    }
    series_id          - ID for the game series
    series_type        - Type of tournament series
    stage_name         - ?
    game_number        - Game number of the series
    radiant_series_wins - Number of wins by Radiant during the series
    dire_series_wins   - Number of wins by Dire during the series
    tower_state        - State of *all* towers in the match
    spectators         - Number of spectators watching
    lobby_id           - ID for the match's lobby
    stream_delay_s     - Delay in seconds for streaming to spectators

    // These fields are only available for matches with teams //
    [radiant_team]
    {
        team_name      - Team name for Radiant
        team_logo      - Team logo for Radiant
        team_complete  - ?
    }
    [dire_team]
    {
        team_name      - Team name for Dire
        team_logo      - Team logo for Dire
        team_team_complete - ?
    }
}

```

## get\_team\_info\_by\_team\_id()

Returns a dictionary with a list of teams within.

```

{
    status          - 1 if success, non-1 otherwise
    [teams]
    {
        admin_account_id - Account ID for team admin
        calibration_games_remaining - ?
        country_code     - ISO 3166-1 country code
        games_played     - Number of games played by team with_
        ↪current team members
        league_id_#      - League IDs in which the team has played
        logo             - UGC ID for the team logo
        logo_sponsor     - UGC ID for the team sponsor logo
        name             - Team's name
        player_#_account_id - Account ID for player # (0-5)
        tag              - Team's tag
        team_id          - Unique team ID
        time_created     - Unix timestamp of team creation
        url              - Team-provided URL
    }
}

```

## get\_player\_summaries()

Returns a dictionary with a list of players within.

```
{
  [player]
  {
    avatar                - 32x32 avatar image
    avatarfull            - 184x184 avatar image
    avatarmedium          - 64x64 avatar image
    communityvisibilitystate - See table below.
    lastlogoff            - Unix timestamp since last time logged out of
↪steam
    personaname           - Equivalent of Steam username
    personastate           - See table below.
    personastateflags     - ?
    primaryclanid         - 64-bit unique clan identifier
    profilestate          - ?
    profileurl            - Steam profile URL
    realname              - User's given name
    steamid               - Unique Steam ID
    timecreated           - Unix timestamp of profile creation time
  }
}
```

### communityvisibilitystate

Value	Description
1	Private
2	Friends only
3	Friends of friends
4	Users only
5	Public

### personastate

Value	Description
0	Offline
1	Online
2	Busy
3	Away
4	Snooze
5	Looking to trade
6	Looking to play

## get\_heroes()

```
{
  count                - Number of results
  status               - HTTP status code
  [heroes]
  {
```

```

    id            - Unique hero ID
    name          - Hero's name
    localized_name - Localized version of hero's name
    url_full_portrait - URL to full-size hero portrait (256x144)
    url_large_portrait - URL to large hero portrait (205x115)
    url_small_portrait - URL to small hero portrait (59x33)
    url_vertical_portrait - URL to vertical hero portrait (235x272)
  }
}
```

## get\_game\_items()

```

{
  count          - Number of results
  status         - HTTP status response
  [items]
  {
    id           - Unique item ID
    name         - Item's name
    cost         - Item's gold cost in game, 0 if recipe
    localized_name - Item's localized name
    recipe       - True if item is a recipe item, false otherwise
    secret_shop  - True if item is bought at the secret shop, false otherwise
    side_shop    - True if item is bought at the side shop, false otherwise
  }
}
```

## get\_tournament\_prize\_pool()

```

{
  league_id      - Unique league ID
  prizepool      - Current prize pool if the league includes a community-funded pool,
↳ otherwise 0
  status         - HTTP status code
}
```

## Towers and Barracks

### Combined status

The overall match tower and barracks status uses 32 bits for representation and should be interpreted as follows:

```

----- Not used.
| | | | | | | | | ----- Dire Ancient Top
| | | | | | | | | ----- Dire Ancient Bottom
| | | | | | | | | ----- Dire Bottom Tier 3
| | | | | | | | | ----- Dire Bottom Tier 2
| | | | | | | | | ----- Dire Bottom Tier 1
| | | | | | | | | ----- Dire Middle Tier 3
| | | | | | | | | ----- Dire Middle Tier 2
| | | | | | | | | ----- Dire Middle Tier 1
| | | | | | | | | ----- Dire Top Tier 3
```

**series\_type**

Value	Description
0	Non-series
1	Best of 3
2	Best of 5

**league\_tier**

Value	Description
1	Amateur
2	Professional
3	Premier

**game\_mode**

Value	Description
0	Unknown
1	All Pick
2	Captain's Mode
3	Random Draft
4	Single Draft
5	All Random
6	Intro
7	Diretide
8	Reverse Captain's Mode
9	The Greeviling
10	Tutorial
11	Mid Only
12	Least Played
13	New Player Pool
14	Compendium Matchmaking
15	Custom
16	Captains Draft
17	Balanced Draft
18	Ability Draft
19	Event (?)
20	All Random Death Match
21	Solo Mid 1 vs 1
22	Ranked All Pick

### lobby\_type

Status	Description
-1	Invalid
0	Public matchmaking
1	Practice
2	Tournament
3	Tutorial
4	Co-op with AI
5	Team match
6	Solo queue
7	Ranked matchmaking
8	Solo Mid 1 vs 1

### leaver\_status

ID	Value	Description
0	NONE	finished match, no abandon
1	DISCONNECTED	player DC, no abandon
2	DISCONNECTED_TOO_LONG	player DC > 5min, abandon
3	ABANDONED	player dc, clicked leave, abandon
4	AFK	player AFK, abandon
5	NEVER_CONNECTED	never connected, no abandon
6	NEVER_CONNECTED_TOO_LONG	too long to connect, no abandon

### team\_id

Value	Description
0	Radiant
1	Dire
2	Broadcaster
3+	Unassigned (?)

### get\_top\_live\_games()

Returns a dictionary that includes top MMR live games

```
{
  [game_list]
  {
    activate_time      -
    deactivate_time    -
    server_steam_id    -
    lobby_id           -
    league_id          - League ID (Available for league matches)
    lobby_type         - See lobby_type table
    game_time          - Current in-game time (in seconds)
    delay              - Delay in seconds for spectators
    spectators         - Number of spectators in-game
    game_mode          - See game_mode table
    average_mmr        - Average MMR of players in the game
  }
}
```

```

    team_name_radiant      - Radiant team name (Available for matches with teams)
    team_name_dire         - Dire team name (Available for matches with teams)
    sort_score             -
    last_update_time       -
    radiant_lead            - Gold lead for Radiant (negative if Dire leads)
    radiant_score           - Radiant kill score
    dire_score             - Dire kill score
    building_state         -
    [players]
    {
        account_id         - Player's 32-bit Steam ID
        hero_id            - Player's hero ID
    }
}

```

## Library Reference

This section covers the `dota2api` package, the `parse` module and the exceptions used.

### API

Dota 2 API wrapper and parser in Python

```
class dota2api.Initialise (api_key=None, executor=None, language=None, logging=None,
                          raw_mode=None)
```

When calling this you need to provide the `api_key` You can also specify a language

#### Parameters

- **api\_key** – (str) string with the api key
- **logging** – (bool, optional) set this to True for logging output
- **raw\_mode** – (bool, optional) get the raw data from dota2 API without parsing it into human-readable string

```
get_game_items (**kwargs)
```

Returns a dictionary of in-game items, used to parse ids into localised names

**Returns** dictionary of items, see [responses](#)

```
get_heroes (**kwargs)
```

Returns a dictionary of in-game heroes, used to parse ids into localised names

**Returns** dictionary of heroes, see [responses](#)

```
get_league_listing ()
```

Returns a dictionary containing a list of all ticketed leagues

**Returns** dictionary of ticketed leagues, see [responses](#)

```
get_live_league_games ()
```

Returns a dictionary containing a list of ticked games in progress

**Returns** dictionary of live games, see [responses](#)

**get\_match\_details** (*match\_id=None, \*\*kwargs*)

Returns a dictionary containing the details for a Dota 2 match

**Parameters** *match\_id* – (int, optional)

**Returns** dictionary of matches, see [responses](#)

**get\_match\_history** (*account\_id=None, \*\*kwargs*)

Returns a dictionary containing a list of the most recent Dota matches

**Parameters**

- **account\_id** – (int, optional)
- **hero\_id** – (int, optional)
- **game\_mode** – (int, optional) see [ref/modes.json](#)
- **skill** – (int, optional) see [ref/skill.json](#)
- **min\_players** – (int, optional) only return matches with minimum amount of players
- **league\_id** – (int, optional) for ids use [get\\_league\\_listing\(\)](#)
- **start\_at\_match\_id** – (int, optional) start at matches equal to or older than this match id
- **matches\_requested** – (int, optional) defaults to 100
- **tournament\_games\_only** – (str, optional) limit results to tournament matches only

**Returns** dictionary of matches, see [responses](#)

**get\_match\_history\_by\_seq\_num** (*start\_at\_match\_seq\_num=None, \*\*kwargs*)

Returns a dictionary containing a list of Dota matches in the order they were recorded

**Parameters**

- **start\_at\_match\_seq\_num** – (int, optional) start at matches equal to or older than this match id
- **matches\_requested** – (int, optional) defaults to 100

**Returns** dictionary of matches, see [responses](#)

**get\_player\_summaries** (*steamids=None, \*\*kwargs*)

Returns a dictionary containing a player summaries

**Parameters** **steamids** – (list) list of 32-bit or 64-bit steam ids, notice that api will convert if 32-bit are given

**Returns** dictionary of player summaries, see [responses](#)

**get\_team\_info\_by\_team\_id** (*start\_at\_team\_id=None, \*\*kwargs*)

Returns a dictionary containing a in-game teams

**Parameters**

- **start\_at\_team\_id** – (int, optional)
- **teams\_requested** – (int, optional)

**Returns** dictionary of teams, see [responses](#)

**get\_top\_live\_games** (*partner='', \*\*kwargs*)

Returns a dictionary that includes top MMR live games

**Parameters** **partner** – (int, optional)

**Returns** dictionary of prize pools, see *responses*

**get\_tournament\_prize\_pool** (*leagueid=None, \*\*kwargs*)

Returns a dictionary that includes community funded tournament prize pools

**Parameters** *leagueid* – (int, optional)

**Returns** dictionary of prize pools, see *responses*

**update\_game\_items** ()

Update the item reference data via the API

**update\_heroes** ()

Update the hero reference data via the API

## Parser

Parse some of the values from the API, all can be found in the *response* returned

`dota2api.src.parse.cluster(response)`

Parse the lobby, will be available as *cluster\_name*

`dota2api.src.parse.game_mode(response)`

Parse the lobby, will be available as *game\_mode\_name*

`dota2api.src.parse.hero_id(response)`

Parse the lobby, will be available as *hero\_name*

`dota2api.src.parse.item_id(response)`

Parse the item ids, will be available as *item\_0\_name*, *item\_1\_name*, *item\_2\_name* and so on

`dota2api.src.parse.leaver(response)`

Parse the lobby, will be available as *hero\_name*

`dota2api.src.parse.lobby_type(response)`

Parse the lobby, will be available as *lobby\_type*

## Exceptions

Not many exceptions exist due to server side validation on the parameters

**exception** `dota2api.src.exceptions.APIAuthenticationError(api_key=None)`

Raised when the API key supplied is invalid

**Parameters** *api\_key* – (str) key used will be displayed upon error

**exception** `dota2api.src.exceptions.APIError(msg)`

Raised when the API response is an error, or the status does not equal one

**exception** `dota2api.src.exceptions.APITimeoutError`

Raised when too many requests are been made or the server is busy

## Contributing

This section provides help for people who wish to contribute to the project.

We are open to most change requests, the only request is that every piece of functionality is accompanied by a test!

## **Documentation**

Documentation improvements are always welcome, I'm hoping this will be a useful guide to the API as most information online is out of date.

## **Bug reports**

Forks or bug reports are welcome! If you spot any errors in the code or documentation please open an issue on [GitHub](#).
